EXPERIENCE

SS&C | Toronto, ON

Senior Software Engineer | April 2026 – Present

- Led end-to-end development of the payroll module for TRAC Web Refresh, implementing complex business rules and edge-case handling for workflows within a platform serving 12 million participants
- Standardized code patterns and encouraged reusable components across the team, reducing duplicated logic and delivering the module 2 months ahead of schedule
- Improved team productivity by mentoring developers on Angular best practices and collaborating closely with Product, BA, and QA to deliver production-ready features
- Supported monthly releases by investigating client-reported issues, troubleshooting defects, and delivering fixes on schedule

Software Engineer | February 2022 – March, 2026

- Enhanced Angular frontend functionality for retirement-plan loan workflows, implementing UI improvements and business requirements while connecting with Spring Boot backend services
- Developed RESTful APIs and microservices to connect with both internal legacy mainframe services and external client systems, enabling reliable communication across application components
- Applied test-driven development (TDD) principles to build and maintain automated test suites, improving software reliability and achieving 80% test coverage

Trellis Studios | New York, NY (Remote)

Full Stack Engineer | September 2020 – January 2022

- Collaborated on a 5-person team to create weavr.cc, a browser-based multiplayer game focused on improving workplace engagement and chemistry for remote teams during COVID-19
- Integrated real-time voice and video chat directly into the game's Vue.js frontend, creating a seamless social experience without requiring external communication tools
- Deployed AWS infrastructure using EC2, Lambda, DynamoDB, and CloudFront for compute, serverless execution, data storage, and content delivery

Harvest Measurement | Hamilton, ON

Software Engineer | May–August 2017, May–August 2018

- Developed a full-stack web application using React and Express.js to visualize real-time gas concentration and temperature data from an IoT monitoring system
- Designed MySQL database schemas and queries to organize and retrieve field data.

PUBLICATIONS

Surprisingly Popular Voting Recovers Rankings, Surprisingly! | *Presented at IJCAI-2021* | *arXiv*

- Built an interactive survey using Meteor and MongoDB to collect ranking and prediction data from 720 participants recruited through Amazon Mechanical Turk
- Implemented R and Python programs to evaluate surprisingly popular voting against conventional voting methods and measure accuracy in recovering ground-truth rankings

EDUCATION

University of Toronto | September 2015 - April 2020 | Toronto, ON

- Honours BSc in Computer Science (AI Specialist) | Minor in Mathematics | Graduated with Distinction

SKILLS

- **Web Applications**: Angular, Vue.js, React, Node.js, Express.js, MongoDB, SQL, Spring Boot, AWS
- **Data Science/Other**: Python, Java, Julia, R, MATLAB
